

Bootstrap methods and their application

Cambridge Series on Statistical and Probabilistic Mathematics

Editorial Board:

R. Gill (Utrecht)

B.D. Ripley (Oxford)

S. Ross (Berkeley)

M. Stein (Chicago)

D. Williams (Bath)

This series of high quality upper-division textbooks and expository monographs covers all areas of stochastic applicable mathematics. The topics range from pure and applied statistics to probability theory, operations research, mathematical programming, and optimization. The books contain clear presentations of new developments in the field and also of the state of the art in classical methods. While emphasizing rigorous treatment of theoretical methods, the books contain important applications and discussions of new techniques made possible by advances in computational methods.

Bootstrap methods and their application

A. C. Davison

*Professor of Statistics, Department of Mathematics,
Swiss Federal Institute of Technology, Lausanne*

D. V. Hinkley

*Professor of Statistics, Department of Statistics and Applied Probability,
University of California, Santa Barbara*
